

International Spring School on the Physics of Complex Systems

Trieste (Italy), 13 May - 8 June 2012

@ SISSA - International School for Advanced Studies

The International School on the Physics of Complex Systems is part of the Master program in Physics of Complex Systems* and it covers a selection of topics at the forefront of research, during an intensive 4-week program:

- Statistical field theory applied to soft matter
- Statistical physics and hydrodynamics
- Random matrices
- Topics in classical and quantum computation
- Inference in computer science and systems biology
- Protein folding and aggregation

The School is open to *Master and PhD students* in physics and related disciplines, from all countries. For more information:
